Pre-drilled holes in board frame make installation easy

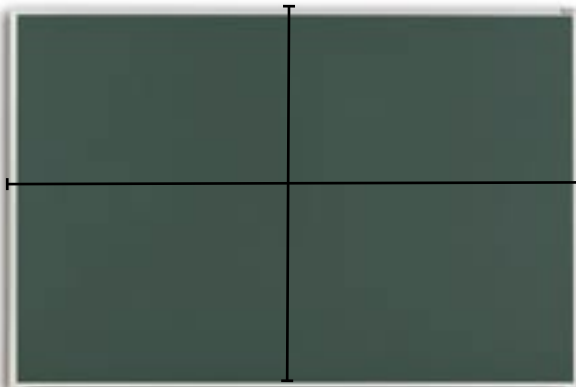

Pre-drilled holes in board frame make installation easy

ALL RETRO-FIT BOARDS ARE BUILT TO ORDER AND NON-RETURNABLE

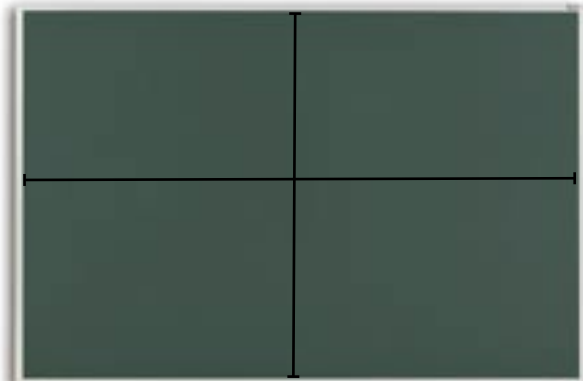

Marsh's Retro-Fit Markerboards are an affordable way to update your school's boards without the trouble of removing your current ones. Retro-Fit Markerboards let you cover your school's existing blackboards and dry erase boards with a fresh porcelain-on-steel writing surface, saving you both money and installation time.

These boards are custom-made, so measure your current board and choose a Retro-Fit Board that is the exact size of your existing board. The satin aluminum frame features pre-drilled holes and mounting hardware is included, making installation quick and simple. Marsh's Retro-Fit Markerboards can be installed over both wood and aluminum frames, and can be used with your existing chalk or marker tray. The writing surface is covered by a 50-year warranty.

- Measure the full width of your current board, frame included. This will be the exact width of your Retro-Fit Markerboard.
- Measure the height of your current board, frame included. Exclude any existing chalk or marker tray from your measurement. This measurement will be the height of your Retro-Fit Markerboard.

- If the frame of your current board extends more than 1/2" from the board's surface, mount your Retro-Fit Board inside of the existing frame. To find the correct size, simply measure the width and height of your current board, excluding the frame.
- This works well if you wish to keep your existing frame intact.

MARKER BOARDS
